Before buying my current vehicles with satellite radio I was skeptical about how great it actually worked. Since I have had a chance to get to know the system I feel it is very helpful and informative. Just as cable tv has its paid programming so does satellite radio. I pay for what I want to hear and if satellite radio can offer me more programming for the same price that's great for the consumer. I listen to both FM and Satellite radio for my traffic and weather and I feel both can exist. Furthermore, only select FM stations give you traffic and weather on a consistent basis. The FM station that I listen to is WTOP in Washington, DC. They are helped by callers and local law enforcement by reporting where there are traffic delays, accidents, etc., which in turn helps people get around these delays. I feel this petition is an ability to stop progress in a technology that some aren't benefiting from monetarily. Think back on how DSL was greeted, or how the Baby Bells were treated when they wanted to get into Long Distance, you will see a similar road block!
